

ICEDID MALWARE INVESTIGATION

SCENARIO

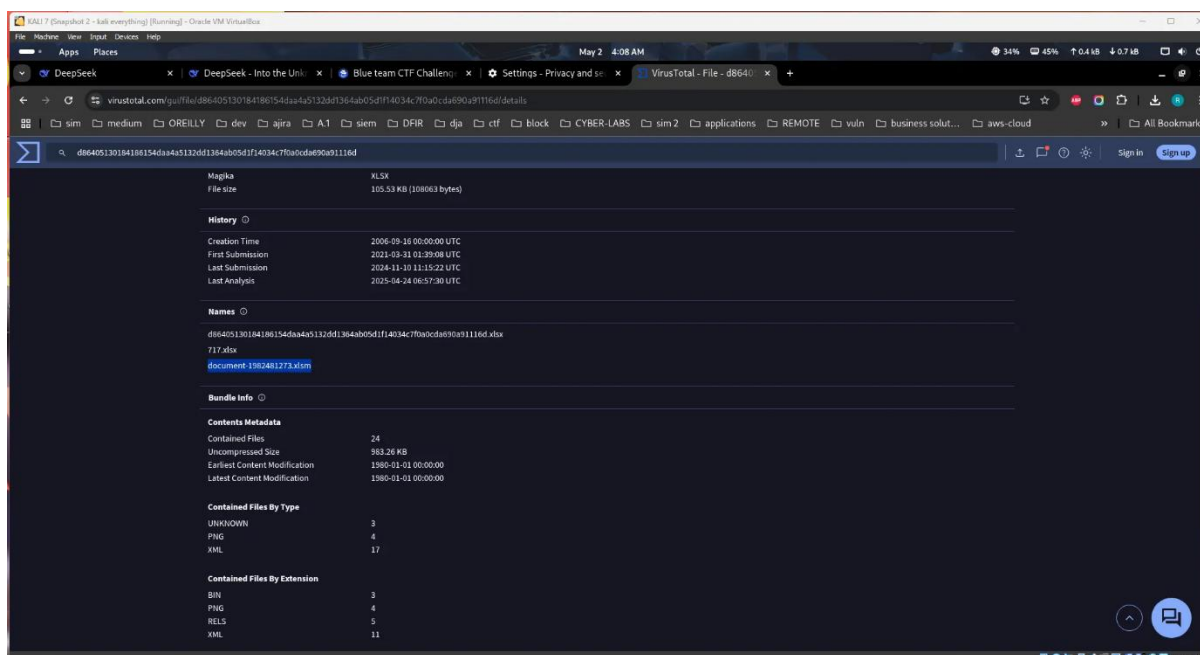

This scenario was taken from the Icedid malware investigation from CyberDefenders which you can find online.

A cyber threat group was identified for initiating widespread phishing campaigns to distribute further malicious payloads. The most frequently encountered payloads were IcedID. You have been given a hash of an IcedID sample to analyze and monitor the activities of this advanced persistent threat (APT) group.

To get most of the answers to this scenario, I used VirusTotal to get to the answer.

Q1: What is the name of the file associated with the given hash?

To get to the answer we downloaded the file from CyberDefenders and copied the hash. We then pasted the hash on VirusTotal and then went to details and searched for names to get the answer

Q2: Can you identify the filename of the **GIF** file that was deployed?

For this one we still check under the same hash from Q1 and check under relations in dropped files to find the GIF

Q3: How many domains does the malware look to download the additional payload file in Q2?

For this question I continued under relations and went under Contacted URLs to find how many domains which was 5.

Q4: From the domains mentioned in Q3, a DNS registrar was predominantly used by the threat actor to host their harmful content, enabling the malware's functionality. Can you specify the Registrar INC of the domain that end with .com?

Under the same hash we used form Q1 I went to relations and went to Contacted URLs. The name of the URL that had the highest threat detection was NameCheap

Q5: Could you specify the threat actor linked to the sample provided?

I went to MITRE ATT&CK and searched for <https://attack.mitre.org/software/S0483/> software and after scrolling down to find out which group using this software then we can see that there is only 1 group which is TA551.

The screenshot shows the MITRE ATT&CK website. The main content area displays information about the TA551 threat group. The sidebar on the left lists various threat groups, with TA551 selected. The main content area includes a description of TA551, a list of associated groups, and a table of associated group descriptions.

MITRE | ATT&CK

Home > Groups > TA551

TA551

TA551 is a financially-motivated threat group that has been active since at least 2018. [1] The group has primarily targeted English, German, Italian, and Japanese speakers through email-based malware distribution campaigns. [2]

Associated Groups: GOLD CABIN, Shathak

Associated Group Descriptions

Name	Description
GOLD CABIN	[1]
Shathak	[2][3]

Q6: In the **Execution** phase, what function does the malware employ to fetch extra payloads onto the system?

This one, I had to dig into triage report then we can see that it used this function from Windows API to download 3003.gif from 5 different domains.

I successfully completed IcedID Blue Team Lab at @CyberDefenders!
